

Pallite Group is proud to announce that it has been awarded the prestigious BLCC Golden Bridge Award for **“Environmental Excellence.”** This award celebrates the remarkable achievements of Belgian and Luxembourg companies that demonstrate a commitment to sustainability in their operations and offerings.

At Pallite Group, sustainability is at the core of their business. Since their inception in 2008, they have dedicated themselves to delivering environmentally friendly products for supply chain distribution and warehouse storage management. They use between 80% and 100% recycled materials in their packaging, logistics, and storage solutions and also ensure that the products are 100% recyclable after use.

Their commitment to sustainability goes beyond merely providing eco-friendly products. They actively fund research to evaluate the environmental impact of their products throughout its lifecycle—from manufacturing and usage in their customers' supply chains to end-of-life disposal. Understanding our operations' effects on the environment enables us to continuously seek improvements and minimise our impact. Pallite Group's commitment is further exemplified by their strides to create a truly eco-friendly operation. All of their manufacturing facilities are powered entirely by solar energy, significantly reducing their carbon footprint. This initiative not only reflects their dedication to renewable energy but also reinforces their mission to support the environment through sustainable practices. These efforts and achievements make Pallite Group a deserving recipient of the BLCC Golden Bridge Award for Environmental Excellence, as they exemplify how businesses can thrive while prioritising the health of our planet.

The Golden Bridge Award for Environmental Excellence underscores Pallite Group's dedication to creating a greener global supply chain.
